IDENTIFIERS Adolescent Suicide; Arrests; Goals 2000; *Indicators; *Oregon

ABSTRACT

This Kids Count databook examines statewide trends in the well-being of Oregon's children, focusing on youth at risk. The statistical report is based on 12 indicators of well-being: (1) juvenile arrests; (2) teen sexuality; (3) high school dropout rate; (4) teen suicide; (5) reading proficiency; (6) math proficiency; (7) child abuse and neglect; (8) crimes against persons; (9) child deaths; (10) low birthweight; (11) infant mortality; and (12) child care supply. An introduction gives an overview of findings, provides guidelines for data interpretation, and describes the data sources. The bulk of the document is comprised of key statewide and county findings on youth-at-risk data, and general county indicators of well-being. Findings indicate that the juvenile arrest rate has been steadily increasing. The teen pregnancy rate and the low birthweight rates have changed very little. Although girls are much more likely to be diagnosed with a sexually transmitted disease, concern among boys and girls is fairly even. The statewide dropout rate decreased slightly. The teen suicide attempt rate worsened slightly. There have been increases in cigarette smoking and alcohol and illicit drug use, especially marijuana. Approximately half of eighth graders met the reading and mathematics proficiency standards in 1997. The child abuse victim rate was 9.9 per 1,000 children. The 1995 child death rate was 26.2, a 6 percent increase over the previous year. Infant mortality was at the lowest rate since 1990. Child care supply improved 26 percent between 1995 and 1996. (KB)

State & County Findings

Introduction

The last several Report Cards issued by Children First for Oregon have pointed to worsening trends in the teen years. The most recent statewide Report Card showed that Oregon is failing its teenagers.

The 1997 County Databook on Oregon's children takes a closer look at data indicators related to teen well-being in Oregon on the county and state level, particularly measures related to at-risk youth. In addition, the 1997 databook also includes a fact sheet for each of Oregon's 36 counties. These provide a snapshot of how counties are faring on 12 different measures of child well-being.

The sources for all data presented are state agencies who do the primary data collection. Children First compiles and presents these data and is limited to the data available from these sources. An overview of how to interpret the data presented and the sources for the data is provided before the county fact sheets.

The statewide and county findings section provides an overview of key findings for both the youth-at risk data and the general county indicators.

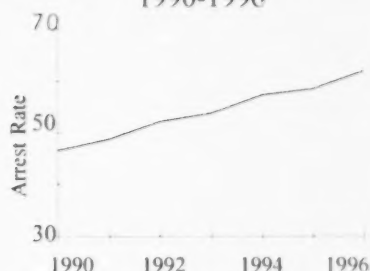

The youth-at risk data measures include: juvenile arrests, teen sexuality, high school dropout, and teen suicide. County fact sheets do not provide detailed information about substance abuse and teen suicide due to availability and/or reliability on the county level.

Child well-being measures include: reading proficiency, math proficiency, child abuse and neglect, crimes against persons, child deaths, low birthweight, infant mortality, and child care supply. These indicators are divided into three categories, Schools, Safety, and Early Childhood.

Juvenile Crime

Oregon Juvenile Arrests

1990-1996

29% of high school students report being in at least one physical fight in the last year.

Nearly 6% of high school students report having carried a gun in the last 30 days.

18% report carrying a weapon other than a gun in the last 30 days.

Of those students, over half were girls.

Source: 1997 Youth Risk Behavior Survey

Juvenile Arrests Statewide

The juvenile arrest rate is the number of juvenile arrests per 1,000 juveniles. It does not measure offenses or convictions, only crimes for which juveniles are arrested. Nearly one-third of all arrests made in the state were of youth under the age of 18 years. In 12 of Oregon's counties, juvenile arrests accounted for more than one-third of all arrests.

The juvenile arrest rate in Oregon has been steadily increasing over the last several years. The 1996 rate of 62 arrests per 1,000 juveniles was 6% higher than the previous year. Oregon is now 33% away from meeting the 2000 Benchmark of 46.5 arrests per 1,000 juveniles.

Juvenile arrests can be divided into three categories: behavioral, property and person crimes. Over half of all juvenile arrests in 1996 were identified as behavioral crimes. Behavioral crimes include curfew, runaway, and liquor law violations. Except for two counties (Harney and Klamath where property crimes accounted for the majority of juvenile arrests), the majority of juvenile arrests were attributed to behavioral crimes. Over 25% of juveniles arrested were 13-14 year-olds.

In 1996, 1,039 Oregon youth were held in state correctional facilities. Twenty-three of those youth were serving in adult facilities.

County Data

Contrary to the statewide trend, the 1996 juvenile arrest rate decreased in twelve counties. The counties are: Columbia, Crook, Curry, Douglas, Gilliam, Grant, Harney, Klamath, Multnomah, Sherman, Wallowa, and Wheeler.

In four Oregon counties juvenile arrests in 1996 accounted for over 40% of the total arrests. These counties are: Baker, Lake, Linn, and Yamhill.

Teen Sexuality

Teen Pregnancy Statewide

The teen pregnancy rate measures the number of pregnancies per 1,000 girls age 10-17 years old.

While the teen pregnancy rate improved by 2% from 1995 to 1996, from 19.2 to 18.8, Oregon's teen pregnancy rate has changed very little over the last several years. Ninety-five percent of the teens who became pregnant were between 15 and 17 years of age. The state remains 25% away from the 2000 Benchmark of 15 pregnancies per 1,000 girls age 10-17.

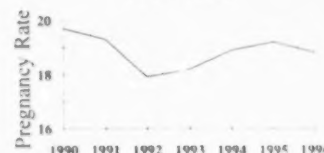

- Over 2,000 babies were born in Oregon to teen mothers under 18 years of age in 1996. Thirty-nine percent of these teen mothers did not receive adequate prenatal care (failed to receive care in the first trimester of pregnancy).

County Data

In 1996, five counties had a teen pregnancy rate 24% higher than the statewide average. These counties are: Clatsop, Jefferson, Klamath, Marion, and Multnomah.

Eleven counties decreased their teen pregnancy rate by more than 10% between 1995 and 1996. These counties are: Baker, Curry, Douglas, Grant, Harney, Lake, Malheur, Morrow, Multnomah, Umatilla, and Wallowa.

**Oregon Teen Pregnancy
1990-1996**

Sexually Transmitted Diseases Statewide

The rate of sexually transmitted disease (STD) per 10,000 youth age 10-19 years was 56.9 in 1996. Over 2,500 STDs were diagnosed in 1996 for this same age group.

Girls are much more likely than boys to be diagnosed with a sexually transmitted disease. Eighty percent of those diagnosed with an STD in 1996 were female. Older teen girls in particular, age 15-19, are the most likely to contract a STD and account for 75% of the STDs diagnosed among 10-19 year-olds in 1996.

County Data

Seven counties had a 1996 STD rate per 10,000 for 10-19 year-olds at least 20% higher than the statewide rate. Counties include: Clatsop, Jefferson, Klamath, Marion, Morrow, Multnomah, and Wasco.

Nearly 2/3 of high school students expressed some level of concern about contracting a sexually transmitted disease.

Although girls are much more likely to be diagnosed with an STD, concern among boys and girls was fairly even.

**Source: 1997 Youth Risk
Behavior Survey**

High School Dropout

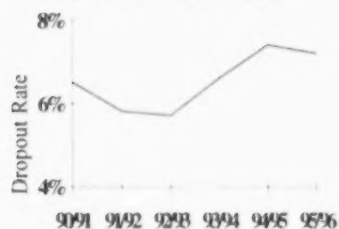

High School Dropout Statewide

The statewide dropout rate decreased slightly by 2% between the 1994-95 and 1995-96 school years, from 7.4% to 7.2%. However, the dropout rates for 1995 and 1996 are the highest dropout rates since 1990. Oregon is 26% away from meeting the Benchmark for the year 2000 of 5.7%.

More than 11,000 Oregon high school students dropped out during the 1995-96 school year. Fifty-six percent of dropouts were teen boys.

The dropout rates for Hispanic (16%), African-American (8.1%), and Native American (9.9%) students decreased slightly from 1994-95 to 1995-96, but these dropout rates still continue to be much higher than for white (6.5%) and Asian American (5.0%) students. Asian Americans had the lowest dropout rate in 1995-96 while Hispanic Americans had a dropout rate more than twice the statewide average.

Oregon Dropout Rate
1990/91 - 1995/96

Reasons for Dropout

School staff were asked to indicate reasons for students dropping out. The primary reasons reported in Oregon include: students did not feel coursework was relevant to future plans beyond high school, frequent discipline problems, working more than 15 hours a week, and substance abuse.

County Data

Half of Oregon's counties lowered their dropout rate by 5% or more between 1994-95 and 1995-96.

Six counties had a 1995-96 dropout rate that was 15% worse than the Oregon rate: Jefferson, Lincoln, Linn, Marion, Multnomah, and Yamhill.

Teen Suicide

Teen Suicide Attempts Statewide

The teen suicide attempt rate worsened slightly between 1995 and 1996 by 2%. The suicide attempt rate per 100,000 children ages 10-17 was 217.7 in 1996. The 1996 rate was second highest since 1990, with 778 reported suicide attempts. Only suicide attempts resulting in medical treatment are recorded by the Oregon Health Division.

Girls are far more likely to attempt suicide than boys; 79% of the suicide attempts in 1996 were by females. Over half of the teen suicide attempts were by teen girls ages 15-17 years.

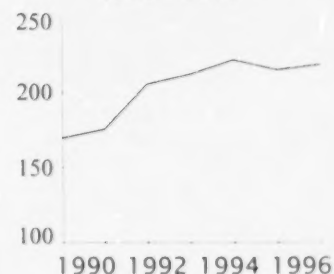

The 1997 Youth Risk Behavior Survey found a similar but not as dramatic gender difference. When high school students were asked whether they ever seriously considered attempting suicide in the last year, 22% of girls said "yes" whereas 16% of boys responded "yes".

Forty-three Oregon youth under the age of 20 took their own lives in 1995. According to the 1994 Vital Statistics report by the Oregon Health Division, girls are more likely to attempt suicide but boys' attempts are more likely to result in death.

County Data

Nine counties had a 1996 suicide attempt rate at least 5% higher than the statewide average. These counties are: Clatsop, Grant, Harney, Jackson, Josephine, Klamath, Lane, Marion, and Multnomah.

**Oregon Teen Suicide
Attempt Rate
1990 - 1996**

22% of high school students report having seriously considered committing suicide during the last 12 months. Nearly two-thirds were girls.

16% of high school students report having no caring adult to talk to when they are scared, worried, or concerned.

Source: 1997 Youth Risk Behavior Survey

Substance Abuse

The most widely used source of substance abuse data about Oregon youth comes from the biennial statewide survey of public school students in sixth, eighth, and eleventh grades called the "Oregon Public School Drug Use Survey". The findings are compiled from students' self-reports. Data here are taken from the 1996 report and include statewide findings only.

17% of high school students reported having had their first drink of alcohol (other than a few sips) before age 11.

93% of students say they don't think smoking is cool.

54% of students who report buying cigarettes in a store during the last 30 days were not asked to show proof of age.

11% of students report driving a car or other vehicle after drinking alcohol.

Source: 1997 Youth Risk Behavior Survey

Marijuana

Marijuana use has been on the rise for both eighth and eleventh graders since 1990. Between the 1994 and 1996 surveys, there has been a 56% increase in use reported among eighth graders and a 29% increase for eleventh graders. In 1996, 15% of eighth graders and 22% of eleventh graders reported having used marijuana in the previous month.

Illicit Drugs

Illicit Drug use increased among both eighth and eleventh graders between 1992 and 1996. In 1996, 22% of eighth graders and 24% of eleventh graders reported using illicit drugs in the last month. Between 1994 and 1996, this represents a 15% increase among eighth graders and an 18% increase among eleventh graders.

Cigarettes

Cigarette smoking has also increased according to the same survey for both eighth and eleventh graders since 1992. Since 1994 there was a 14% increase in smoking among eighth graders and a 12% increase for eleventh graders. In 1996, 22% of eighth graders and 28% of eleventh graders reported having smoked cigarettes in the last month, the highest for both grades since 1990.

Alcohol

Alcohol use among eleventh graders increased between 1992 and 1996. In 1996, 43% of eleventh graders reported using alcohol, a 4% increase since 1994.

Schools

Reading Proficiency

Oregon improved its reading proficiency scores among eighth graders by 5% between 1995-96 and 1996-97. In the 1996-1997 school year, just over half (55%) of eighth grade students achieved proficiency in reading.

Seven counties had reading proficiency scores above 60%. They are: Benton, Clackamas, Deschutes, Lake, Lane, Sherman, and Washington.

Nine Oregon counties had less than half of their eighth graders achieving proficiency in reading: Gilliam, Jefferson, Marion, Morrow, Multnomah, Tillamook, Umatilla, Wasco, and Wheeler.

Math Proficiency

Less than half (49%) of Oregon eighth grade students met the math proficiency standards in 1997. This was a 1% decrease from the previous school year.

In only nine counties did more than 50% of eighth grade students achieve proficiency in math. They include: Baker, Benton, Clackamas, Deschutes, Grant, Lane, Multnomah, Sherman, and Washington.

Safety

Child Abuse & Neglect

In 1996, there were 8,325 victims of child abuse confirmed in Oregon. The child abuse victim rate per 1,000 children under 18 years was 9.9. Thirty children died in 1996 from causes related to abuse and/or neglect. Two-thirds of the deaths were children under the age of four.

Seven counties had a child abuse victim rate more than double the statewide rate. They are: Baker, Harney, Klamath, Lake, Lincoln, Morrow, and Union.

The tragedy in Oregon for so many children and families is that the State Office for Services to Children and Families is unable to respond to many of the child abuse reports it receives because of inadequate resources. A hierarchy of response has therefore been created within the system. The result is that younger children and life-threatening circumstances take priority while many other abuse cases, particularly for adolescents, go uninvestigated.

Crimes Against Persons

The statewide rate for Crimes Against Persons (i.e. negligent homicide, forcible rape, robbery, aggravated assault) per 1,000 Oregonians improved between 1995 and 1996 by 11%. The 1996 rate of 15.5 is the lowest rate since 1990.

Nearly a third of Oregon's counties have a Crimes Against Persons rate 30% better than the statewide rate. Counties include: Benton, Columbia, Gilliam, Grant, Harney, Hood River, Lake, Union, Wallowa, Washington, and Wheeler.

Child Deaths

The 1995 Child Death Rate per 100,000 children ages 1-14 years was 26.2. This was a 6% increase over the previous year. There were 167 deaths of children under age 15 in 1995.

Early Childhood

Low Birthweight

The 1996 statewide rate of babies born at low birthweight was 53.5 per 1,000 live births. Over 2,300 babies were born weighing less than 2500 grams. Oregon's low birthweight rate has changed very little since 1990.

Eleven counties had a low birthweight rate at least 20% lower than the Oregon rate. They include: Baker, Benton, Columbia, Crook, Gilliam, Grant, Lincoln, Morrow, Polk, Wasco, and Wheeler.

Infant Mortality

The 1995 Oregon infant mortality rate was 6.1 deaths of infants under age one per 1,000 live births. This was a 14% improvement from the previous year and the lowest rate since 1990. The 1995 rate is less than 2% away from meeting the statewide benchmark of 6 for the year 2000.

Four counties had an infant mortality rate in 1995 that was double the Oregon rate: Baker, Clatsop, Harney, and Jefferson.

Thirteen counties had an infant mortality rate that was at least 23% better than the statewide rate: Coos, Crook, Douglas, Josephine, Lane, Lincoln, Polk, Sherman, Union, Wallowa, Washington, Wheeler, and Yamhill.

Child Care Supply

The Oregon child care supply rate improved by 26% between 1995 and 1996. The child care supply rate measures the available child care spaces for every 100 children under the age of 13 years. The data are collected through the child care resource and referral agencies in the different counties. Unfortunately, many of the rural counties do not have a resource and referral agency, so data are not reported for those counties. The statewide rate reported here provides an incomplete picture of the available child care supply in the state.

The counties for which there continue to be no available child care supply data include: Coos, Curry, Gilliam, Harney, Lincoln, Malheur, Sherman, and Wheeler.

There are several counties whose child care supply rate has either met or exceeded the 2000 Benchmark rate of 21 spaces per 100 children under 13 years. They include: Benton, Deschutes, Hood River, Jackson, Klamath, Lane, Multnomah, Tillamook, Union, and Washington.

Interpreting the Data

Assessing the Data

County fact sheets can be used to improve the quality of life for children and families. Assessing the data is the first step to making these improvements.

It is important to assess a county's data-based progress to see if results are moving in the right direction. If things are moving in the wrong direction, the key is to investigate why. The fact sheet is designed to be a starting point for such assessment and investigation. It should be used to initiate a dialogue with interested stakeholders about how to improve the quality of life for children in the county.

Beware of Small Numbers

Counties vary significantly in population, size, and geography and this variance should be considered when interpreting the differences among counties. Be aware that small counties may have a small number of events (e.g., child deaths, suicide attempts) which can cause rates to vary considerably from year to year; such variations may not reflect significant changes in the indicators. For this reason, when there are fewer than ten incidents, there is no detailed data breakdown of events. Similarly, percent changes in the rates are not reported for counties with less than 45,000 people.

Understand What is Being Measured

It is important to understand what is being measured and how. Several types of data information are available for each indicator, and it is important to distinguish among them. The number, rate, percentage change between years, the five year average, and the county rate compared to Oregon are all very different measures. A relevant column heading explains the information presented in the county indicator box. To get a better understanding of how the indicators themselves are defined, refer to Definitions and Sources.

Remember the Limits and Uses of Data

While these data provide important baseline information, they must be understood in a broader context. Remember that a data snapshot provides one way to look at how children are doing in the county. There are many other important perspectives to include and consider in piecing together an accurate composite. Some of the other sources of critical viewpoints include: human service agencies, government, schools, parents, and youth themselves.

Let the Data User Beware

For many of these indicators, there are no perfect methods to measure data outcomes. For example, it is very difficult to get a perfect count on the number of teens who attempted suicide in a given year. Moreover, counties have varying reliability in their record keeping systems or resources committed to counting these occurrences.

Children First relies on the data that is available from different state agencies. Many of these measures are in need of improvement, particularly the child care supply information and the child abuse and neglect data. However, interpreted carefully, data presented here can be very useful tools for developing a meaningful assessment of child well-being.

COUNTY

INDICATORS KEY

NUMBER 95/96

Number of incidents for the most recent year of data, 1995 or 1996.

RATE 95/96

County rate for the most recent year of data, 1995 or 1996.

RATE CHANGE SINCE 94/95

Percentage change between rate in previous year, 1994/1995 and 1995/1996. Percentage change is not reported for counties with less than 45,000 people due to small number of events.

PREVIOUS 5-YEAR AVERAGE RATE

Average of the previous five years of data, not including most recent year of data.

95/96 RATE COMPARED TO OREGON

Comparison of county rate for 1995 or 1996 with Oregon rate for same year.

NA

Data not available.

Definitions and Sources

ADEQUATE PRENATAL CARE

Percentage of babies whose mothers received adequate prenatal care as defined by care having begun in the first trimester of pregnancy (1996 - Provisional Data).

Source: Center for Health Statistics, Oregon Health Division

CHILD ABUSE & NEGLECT VICTIMS

Number of children abused and neglected per 1,000 children under 18 years old (1996). Data for Wasco and Sherman counties are combined.

Source: State Office for Services to Children and Families

CHILD CARE SUPPLY

Number of identified child care slots available for every 100 children under 13 years old (1996). Since 1995, data are no longer available in counties where there are no state-funded child care resource and referral agencies. Five year average not available due to change in methodology over five year period.

Source: Child Care Division of the Oregon Employment Department

CHILD DEATHS

Number of child deaths (ages 1-14) per 100,000 children (1995 - Provisional Data).

Source: Center for Health Statistics, Oregon Health Division

CRIMES AGAINST PERSONS

The number of crimes against persons (negligent homicide, forcible rape, other sex crimes, kidnapping, robbery, aggravated assault, simple assault) reported per 1,000 Oregonians (1996).

Source: Uniform Crime Reporting Program of the Department of State Police

HIGH SCHOOL DROPOUT

Percentage of students who dropped out of high school during the school year (1995-96).

Source: Oregon Department of Education

INFANT MORTALITY

Number of infant deaths under one year of age per 1,000 live births (1995).

Source: Center for Health Statistics, Oregon Health Division

JUVENILE ARRESTS

Juvenile arrests per 1,000 juvenile Oregonians. This indicator does not measure offenses by juveniles, only crimes for which juveniles were arrested. It includes all types of crimes, including those against persons, property, and behavioral crimes (1996 - Preliminary Data Not Audited).

Source: Uniform Crime Reporting Program of the Department of State Police

JUVENILES IN CORRECTIONAL FACILITIES

Youth committed to the custody of the State of Oregon Youth Authority (MacLaren, Hillcrest) and Oregon Department of Corrections (1996). Some youth may be counted more than once if they entered close custody more than once in 1996.

Source: Oregon Youth Authority & Oregon Department of Corrections

LOW BIRTHWEIGHT INFANTS

Low birthweight infants born weighing less than 2500 grams per 1,000 births (1996 - Provisional Data).

Source: Center for Health Statistics, Oregon Health Division

POPULATION ESTIMATES

Population estimates for Oregon and its counties by age (July 1, 1996).

Source: Center for Population Research and Census, Portland State University.

REASONS FOR DROPOUT

Factors influencing the decision to drop out as reported by school officials and/or students. Only the two or three most cited factors were reported.

Source: Oregon Department of Education

SEXUALLY TRANSMITTED DISEASES

Number of sexually transmitted diseases (chlamydia, gonorrhea, and early syphilis combined) diagnosed per 10,000 children ages 10-19 (1996 - Provisional Data).

Source: Center for Health Statistics, Oregon Health Division

SUICIDE ATTEMPTS

Number of suicide attempts resulting in hospitalization or death per 100,000 children ages 10-17 (1996 - Provisional Data).

Source: Center for Health Statistics, Oregon Health Division

TEEN CHILDBIRTHS

Number of births to Oregon teens, ages 10-17 (1996 - Provisional Data).

Source: Center for Health Statistics, Oregon Health Division

TEEN PREGNANCY

The sum of resident live births and induced abortions among females ages 10-17 per 1,000 females ages 10-17 (1996 - Provisional Data).

Source: Center for Health Statistics, Oregon Health Division

TYPE OF CRIME

Percentage of juvenile arrests for crimes against persons (murder, homicide, rape, kidnapping, robbery, assault), crimes against property (burglary, larceny, motor vehicle theft, arson, forgery/counterfeit, fraud, embezzlement, stolen property, vandalism), or behavioral crimes (weapon laws, prostitution, drug laws, gambling, crimes against family, D.U.I., liquor laws, disorderly conduct, curfew, runaway juveniles).

1997 STATUS of CHILDREN

State of Oregon

1996 Population

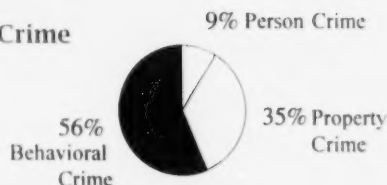

Total	3,181,000
Age 0-9	461,056
Age 10-17	357,327

JUVENILE CRIME

Arrests

There were 49,549 juvenile arrests in 1996. Juvenile arrests accounted for 29% of all state arrests in 1996.

Type of Crime

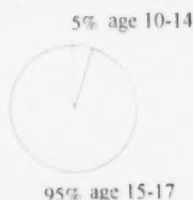

1,039 youth were held in state correctional facilities in 1996.

TEEN PREGNANCY & SEXUALITY

Pregnancy

The pregnancy rate was 18.8 per 1,000 girls age 10-17 in 1996.

Childbearing

2,106 babies were born to teen mothers in 1996. 39% of these teen mothers did not receive adequate prenatal care.

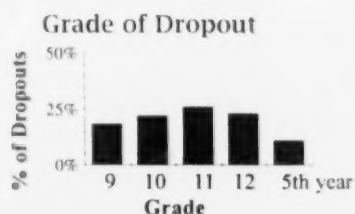

Sexually Transmitted Diseases

The 1996 STD rate per 10,000 for age 10-19 is 56.9 (2,528 STDs reported). 80% of cases were diagnosed in teen girls.

HIGH SCHOOL DROPOUT

Dropouts 1995-96

In the 1995-96 school year, 11,056 students dropped out of high school. 56% of dropouts were teen boys.

Reasons for Dropping Out

Top reasons reported by students and/or school personnel: frequent discipline referrals, working more than 15 hours a week, and substance abuse.

JUVENILE CRIME

Arrests

There were 120 juvenile arrests in 1996. Juvenile arrests accounted for 42% of all county arrests in 1996.

Type of Crime

One county youth was held in a state correctional facility in 1996.

TEEN PREGNANCY & SEXUALITY

Pregnancy

The pregnancy rate was 6.7 per 1,000 girls age 10-17 in 1996.

Demographic data not reported due to low number of incidents

Childbearing

Two babies were born to teen mothers in 1996.

Sexually Transmitted Diseases

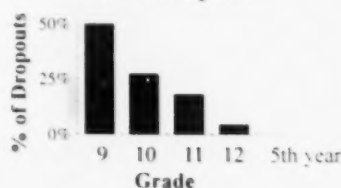

The 1996 STD rate per 10,000 for age 10-19 is 8.3 (1 STD reported).

HIGH SCHOOL DROPOUT

Dropouts 1995-96

In the 1995-96 school year, 22 students dropped out of high school. 55% of dropouts were teen boys.

Grade of Dropout

Reasons for Dropping Out

Top reasons reported by students and/or school personnel: coursework irrelevant to life after high school and peer pressure.

JUVENILE CRIME

Arrests

There were 17 juvenile arrests in 1996. Juvenile arrests accounted for 16% of all county arrests in 1996.

Type of Crime

One county youth was held in a state correctional facility in 1996.

TEEN PREGNANCY & SEXUALITY

Pregnancy

The pregnancy rate is not available for girls age 10-17 in 1996.

Demographic data not reported due to low number of incidents.

Childbearing

No babies were born to teen mothers in 1996.

Sexually Transmitted Diseases

No STDs were reported in 1996 for teens 10-19.

HIGH SCHOOL DROPOUT

Dropouts 1995-96

In the 1995-96 school year, 2 students dropped out of high school.

Grade of Dropout

Demographic data not reported due to low number of incidents.

Reasons for Dropping Out

Top reasons reported by students and/or school personnel: course work was irrelevant to life beyond high school and a lack of personal attention in class.
